Salganskaya Str. 7, Nizhny Novgorod,
603950, Nizhny Novgorod Region

To whom it may concerns

This letter is issued in order to confirm the phrase “*Aqualor Active with unique technology of saturation of seawater with CO2 bubbles*” which used by Nizhpharm JSC in promo materials in respect of Aqualor Active products.

Aurena Laboratories AB, Fjärrviksvägen 22, 653 50 Karlstad, Sweden with company registration number 556283-2559, (hereinafter – Aurena) is the manufacturer of technology and system for Seawater and Saline nasal products that are used to fill CO2.

By this letter, Aurena confirms and informs that the system of gassing which used for Aqualor Active products is a unique technology for Seawater and Saline nasal products.

The CO2 comes from a pharma-grade gas cylinder - “Phargalis 2”, from the gas company Air Liquide.

The gassing process is mechanical, meaning that the carbonation is introduced into the product with a special design machinery in the production line. Aurena has designed and built a special machine that is used to fill CO2 in the cans after the filling of seawater. This is, as far as Aurena is aware, the only machine of its kind, for this purpose, in the world.

On behalf of Aurena
Karlstad, Sweden, August 11, 2020

Magnus Hedman
Director, Business Development
